

Project – Amazon Sales Dashboard

Introduction:

This Power BI project provides an in-depth analysis of Amazon product sales and Prime movie performance. By integrating and visualizing data from pre-processed Excel sources, the dashboard enables users to track sales, product popularity, customer reviews, and viewing trends across different categories and time periods. Through dynamic measures like YTD/QTD Sales and interactive visuals such as stacked bar charts, area graphs, and donut charts, the solution helps stakeholders make data-driven decisions for product strategy, inventory planning, and content optimization.

Steps:

1. Imported Data

- Loaded Amazon Combined Data and Amazon Prime Movies from pre-processed Excel files.
- Verified row counts for data integrity.

2. Checked Data Quality

- Opened Power Query Editor.
- Enabled Column Quality, Distribution, Profile.
- Ensured:
 - 100% valid values.
 - 0% errors.
- Transformed data:
 - Converted Order Date from text to Date format in Amazon_Data table.
 - Converted Price(Dollar) and Number of reviews in both tables and Release Year in Amazon Prime Data table from text to Whole Number format.

3. Created Date Table

- Created a new table
`Date Table = CALENDAR(MIN(Amazon_Data[Order Date]), MAX(Amazon_Data[Order Date]))`
- Added below columns:
`Month Name = FORMAT('Date Table'[Date], "MMM")`
`Month Number = MONTH('Date Table'[Date])`
`Week = WEEKNUM('Date Table'[Date])`
`Quarter Name = CONCATENATE("Qtr ", 'Date Table'[Quarter])`
- Created relationship with 'Amazon_Data' to 'Date Table' (one-to-many).
`[Amazon_Data[Order Date] <— Date Table[Date]]`

4. Created Measures

```
YTD Sales = TOTALYTD(sum(Amazon_Data[Price(Dollar)]), 'Date Table'[Date])
QTD Sales = TOTALQTD(sum(Amazon_Data[Price(Dollar)]), 'Date Table'[Date])
YTD Product Sold = TOTALYTD(COUNT(Amazon_Data[Product Category]), 'Date Table'[Date])
YTD Reviews = TOTALYTD(sum(Amazon_Data[Number of reviews]), 'Date Table'[Date])
```

5. Created Amazon Product Dashboard

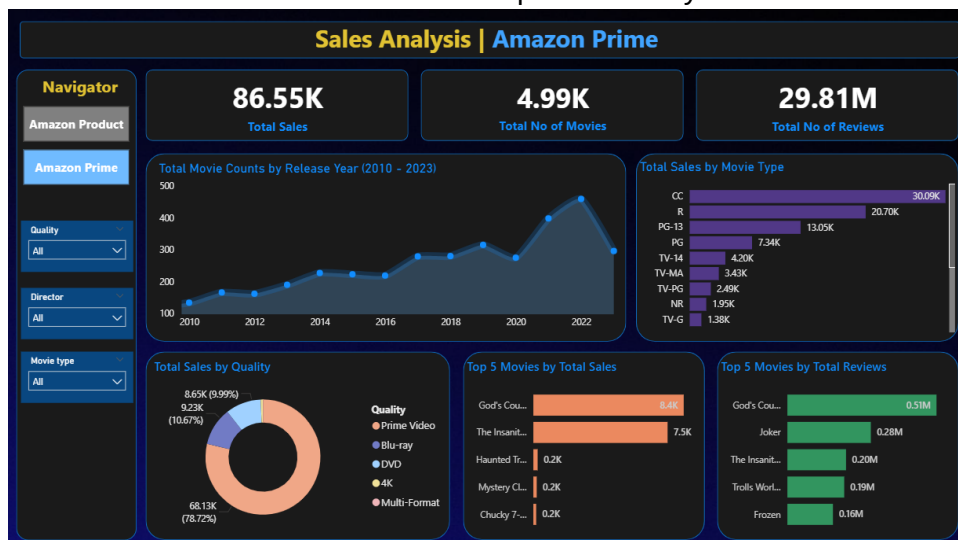

- Added Dashboard Title
- Added Slicers for:
 - Product Category and Quarter
- Added Cards to show YTD Sales, QTD Sales, YTD Product Sales and YTD Reviews

- Added an Area Chart to show data Sales by Month
- Added a Stacked Bar Chart to show Sales by Week
- Added a Table containing 4 Columns - Product Category, YTD Sales, QTD Sales and %YTD Sales to show Sales by Product Category.
- Added Stacked Bar Chart to show Top 5 Product by YTD Sales
- Added Stacked Bar Chart to show Top 5 Product by YTD Reviews

6. Created Amazon Prime Dashboard

- Added Dashboard Title
- Added Slicers for:
 - Quality, Director and Movie Type
- Added Card to show:
 - Total Sales, Total No of Movies and Total No of Reviews
- Added an Area Chart to show Total Movie Counts by Release Year (2010 - 2023)
- Added a Stacked Bar Chart to show Total Sales by Movie Type
- Added a Donut Chart to show Total Sales by Quality
- Added a Stacked Bar Chart to show Top 5 Movies by Total Sales
- Added a Stacked Bar Chart to show Top 5 Movies by Total Reviews

7. Dashboard Design and Formatting

- Added Page Navigator
- Dark blue theme background
- Rounded corners and visual shadows
- Consistent font and title formatting

Key Findings:

1. Amazon Product Dashboard

KPI Cards

- **YTD Sales:** \$2.18M – Indicates total revenue year-to-date.
- **QTD Sales:** \$811.09K – Strong sales performance in the current quarter.
- **YTD Reviews:** 19.42M – High engagement or customer feedback on products.
- **YTD Product Sold:** 27.75K – Indicates high product demand across categories.

Sales by Month (Area Chart)

- Sales spike during **November and December**, suggesting strong seasonal or holiday sales trends.
- Lowest sales observed around **February**, indicating a potential post-holiday drop.

Sales by Week (Stacked Bar Chart)

- Steady growth in weekly sales with notable peaks around **weeks 45–50**, reinforcing Q4 strength.

Sales by Product Category (Table)

- **Men Shoes:** Highest contributor with **43.18%** of total YTD Sales.
- Followed by **Camera (22.62%)** and **Men Clothes (16.42%)**.
- **Mobile & Accessories** contributes the least (**1.80%**) among listed categories.

Top 5 Products by YTD Sales (Bar Chart)

- **Nikon, Atomos, and Solid Gear** products dominate sales.
- Indicates strong performance of camera-related and footwear products.

Top 5 Products by YTD Reviews (Bar Chart)

- **SanDisk** products dominate customer reviews, highlighting popularity and user feedback strength.
- High review counts may correlate with frequent sales and repeat purchases.

2. Amazon Prime Dashboard

KPI Cards

- **Total Sales:** \$86.55K
- **Total No of Movies:** 4.99K
- **Total No of Reviews:** 29.81M – Very high customer engagement, especially through review activity.

Total Movie Counts by Release Year (Area Chart)

- A gradual increase in movie availability from **2010 to 2023**.
- Small dips around 2013–2014 and rapid growth post-2018, indicating content expansion.

Total Sales by Movie Type (Stacked Bar Chart)

- **CC, R, and PG-13** rated movies lead sales.
- Indicates that mature or general audience content drives revenue.

Total Sales by Quality (Donut Chart)

- **Prime Video** leads with **78.72%** of sales.
- Followed by **Blu-ray** and **DVD**, confirming digital streaming dominance over physical formats.

Top 5 Movies by Total Sales (Bar Chart)

- **"God's Country"** and **"The Insanity"** lead sales significantly.
- Others contribute marginally, suggesting blockbuster influence or limited top performers.

Top 5 Movies by Total Reviews (Bar Chart)

- **"God's Country"**, **"Joker"**, and **"Frozen"** dominate in reviews.
- High review count correlates with popular and possibly rewatchable content.

Conclusion:

The Amazon Sales and Prime Movies dashboards offer a comprehensive and interactive view of business performance across both e-commerce and streaming platforms. With time-based insights, top product/movie analysis, and intuitive filtering options, stakeholders can explore patterns in consumer behavior, evaluate product effectiveness, and assess market engagement over time. The clean, theme-consistent design and powerful DAX-driven KPIs ensure the dashboards are not only informative but also scalable for future enhancements like seasonal trend prediction and cross-platform comparison.
