

Project – GAB Sales Dashboard

As part of this task, I created a **Sales Dashboard** for the 'Global Academy of Business' using Pivot Tables and Pivot Charts in Excel. The step-by-step process is outlined below:

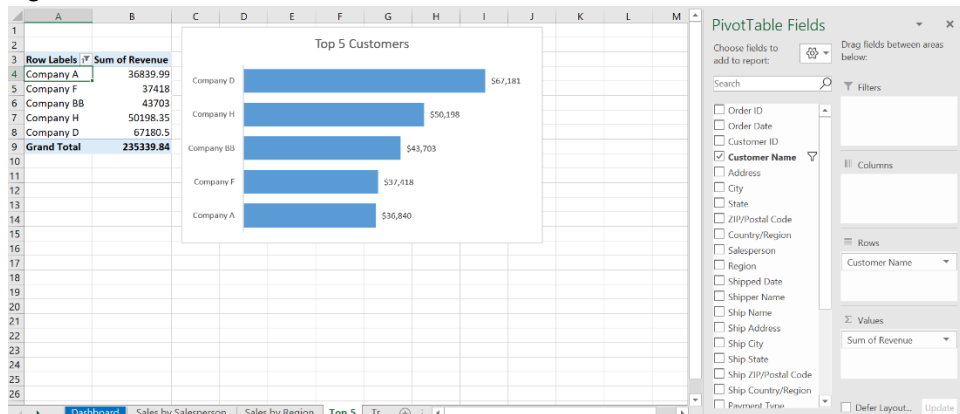

1. I first created a Pivot Table to analyze **Sales by Salesperson**, and inserted a bar chart to visualize the results. A slicer was added to enable dynamic filtering based on salesperson names.
2. I formatted the data by displaying the sum of revenue in currency format and sorted the values from largest to smallest for better readability.

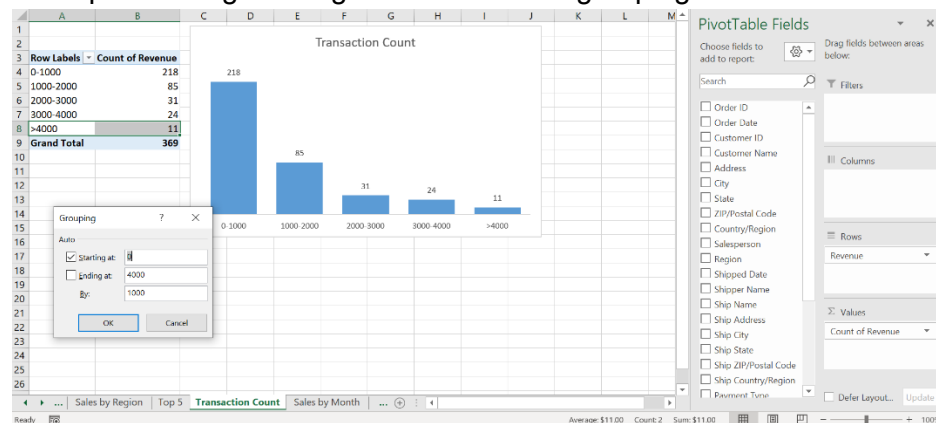

3. Similarly, I created a column chart to analyze **Sales by Region** and added a slicer to filter by region.

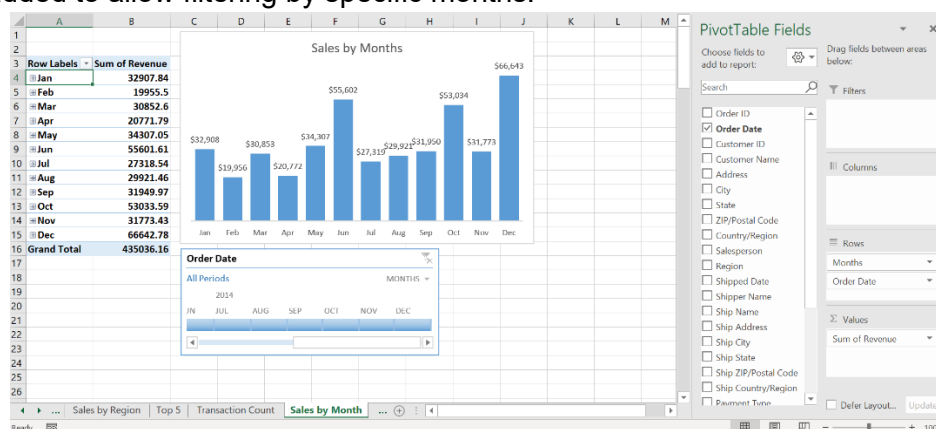

4. To highlight key customers, I created a bar chart showing the **Top 5 Customers** by applying a value filter on the Pivot Table.

5. Next, I developed a column chart to represent the **Transaction Count** by grouping values into specific ranges using the Pivot Table's grouping feature.

6. A column chart was also created to display **Sales by Months**, and a timeline filter was added to allow filtering by specific months.

7. Finally, I brought all the charts and interactive filters into a new worksheet titled **“Dashboard”**, organizing them into a clear and cohesive layout to represent the overall sales analysis effectively.
